CHAPTER 01 / MINDSET

Use AI as a thinking assistant

A strong productivity system combines clear goals, useful prompts, human judgment and a simple review loop.

The 4-step method

- Define the actual task in one sentence.
- Give only the context needed to complete it.
- Ask for a specific format: outline, checklist, table or revised draft.
- Verify the result and decide what to keep.

Starter prompt

I need to complete [TASK] for [AUDIENCE] by [DEADLINE]. Ask me up to three essential questions, then provide a step-by-step plan with the smallest useful next action.

CHAPTER 02 / PLANNING

Turn ideas into a weekly plan

Use AI to draft priorities; use a calendar or task list to make commitments real.

The weekly review

- List all tasks, including school, work and personal commitments.
- Identify the three outcomes that matter this week.
- Estimate time conservatively and allow room for interruptions.
- Schedule focused work blocks and leave recovery time.

Planning prompt

Organize the following tasks into Must do, Should do and Could do. I have [X] hours available. Make a realistic weekly schedule with breaks, and flag tasks that cannot fit. [TASKS].

Do not treat AI-generated time estimates as facts. Update your plan when actual effort differs.

CHAPTER 03 / LEARNING

Use retrieval practice for studying

Summaries are useful, but answering questions from memory strengthens learning more than rereading alone.

A simple study cycle

- Read one short topic from a reliable source.
- Close the notes and explain the key idea in your own words.
- Ask AI to quiz you, one question at a time.
- Check answers against the original source.
- Review incorrect answers again later.

Study prompt

Using only these study notes, quiz me on one concept at a time. Wait for my answer. Explain why an answer is right or wrong and cite the exact supporting part of my notes. [NOTES].

CHAPTER 04 / WRITING

Make your messages clearer

AI can help with structure and tone. It should not invent facts or commitments.

Useful writing tasks

- Turn messy notes into a clear update.
- Write a polite follow-up from a factual draft.
- Shorten a long explanation without removing important context.
- Improve grammar while preserving your own voice.

Writing prompt

Improve this message for clarity and professional tone. Keep all factual claims and dates exactly as written. Make it concise and natural. Point out any ambiguous wording. [DRAFT].

Review the final message before sending, especially names, attachments, claims and deadlines.

CHAPTER 05 / DATA

Explore a small spreadsheet

You do not need advanced automation to get value from data. Start with a simple table and check the calculations.

Example: personal task log

Task	Minutes	Outcome
Review inbox	15	Four replies
Prepare slides	45	First draft
Study topic	30	Quiz completed

Questions to ask AI

- Which columns should be standardized?
- What categories appear most frequently?
- How could I visualize time spent without misleading charts?
- Which formulas can I verify in Google Sheets?

Never share sensitive or confidential spreadsheet information in an AI prompt unless the tool and your organization’s rules permit it.

CHAPTER 06 / SAFETY

Build habits that last

Use tools to reduce repetitive effort, not to outsource all important decisions.

Your AI quality checklist

- Can I verify the response from reliable information?
- Is the output specific enough to be useful?
- Have I removed private or confidential data?
- Does the output sound like me and reflect the real situation?
- Can I perform the next step without an additional paid tool?

Seven-day challenge

Pick one activity - planning, studying or writing. Use one AI prompt every day, make one careful edit, and note whether it saved time or improved quality. Keep what actually helps.
