CAREER TOOLKIT

Get Hired with AI

A practical starter kit for Indian freshers and early-career applicants

FREE DIGITAL EDITION | 2027 starter edition

Prepared by VISWAVISNUS · Educational use only

CHAPTER 01 / START HERE

Build a repeatable job search

Finding a first job is easier when you run a clear process: select roles, understand employer needs, adapt your evidence, practise your explanation and track results. AI can help with drafting, but you are responsible for accuracy.

The four-part system

- Target: choose two or three realistic job families instead of applying indiscriminately.
- Translate: turn a job posting into a list of skills, tasks and proof you can provide.
- Prepare: create a strong master resume, then tailor a copy to each suitable role.
- Review: keep a record of applications, replies, interviews and lessons.

Quick exercise

Write down your preferred city, role, minimum acceptable terms and available start date. Then list three projects, internships or college activities that show relevant skills.

What AI should not do

Do not let a model invent experience, grades, certifications, internships or employers. Never paste government IDs, passwords, confidential documents or full third-party personal data into a public AI tool.

CHAPTER 02 / POSITIONING

Choose roles that match your evidence

A clear target improves the quality of your resume and saves time. Use this matrix to make your search specific.

Target role	Examples of evidence	Keywords to research
Operations coordinator	College event logistics, volunteer scheduling, spreadsheet tracking	Planning; documentation; reporting
Business development associate	Campus outreach, customer-facing work, lead research	Prospecting; communication; CRM
Junior analyst	Spreadsheet projects, visualizations, research assignments	Excel; SQL; dashboards
Customer success associate	Helping users, documenting issues, resolving problems	Support; onboarding; service

Write a role statement

“I am seeking an entry-level **[role]** position where I can apply **[skill 1]** and **[skill 2]**. My strongest evidence is **[project or outcome]**.”

Decision rule

Apply when you can explain why you fit the essential requirements. Stretch applications can be reasonable, but avoid claiming you meet criteria you do not.

CHAPTER 03 / JOB POSTS

Read a job description intelligently

Use AI to organize a posting, not to decide for you whether a company is legitimate or whether you are guaranteed an interview.

Prompt 1 — role analysis

Copy and customize

Act as a career research assistant. Analyze the job description below. Return: (1) six essential capabilities; (2) three optional capabilities; (3) likely day-to-day tasks; (4) interview topics; (5) questions I should clarify. Do not invent requirements or facts about the company. Job description: [PASTE PUBLIC JOB TEXT].

Manual fact check

- Compare extracted requirements with the original job posting.
- Verify the company and application URL through its official website.
- Confirm work location, salary information (if provided), and application deadline.
- Never pay a recruiter or unknown person for a “guaranteed” job offer.

Match evidence, not buzzwords

For each essential skill, write an example from coursework, internships, volunteering or real work. If you have no supporting example, mark it as a learning gap rather than adding a false claim.

CHAPTER 04 / RESUME

Create an honest, readable resume

A resume should be easy for both a recruiter and software to read. No format can guarantee success in an applicant-tracking system.

A practical structure

- Contact: name, professional email, city, portfolio and LinkedIn URL if relevant.
- Profile: two to three lines summarizing role target and verifiable strengths.
- Skills: specific tools or methods you can demonstrate.
- Experience/projects: achievements, scope, tools and outcomes.
- Education: degree, institution and relevant coursework when useful.

Weak versus useful evidence

Weak bullet	Stronger, truthful rewrite
Good communication skills	Presented project results to a group of 20 classmates and answered questions.
Knowledge of Excel	Built an Excel inventory tracker with validation and weekly summaries.
Hard-working team player	Coordinated a three-person project, tracked milestones and completed the deliverable.

Accuracy first

Use numbers only if they are true and you can explain how they were measured. For personal projects, clearly label them as projects rather than employment.

CHAPTER 05 / RESUME

Use AI to edit, not invent

Work from a verified master resume. For each job, align terminology with the employer only where it accurately describes your experience.

Prompt 2 — resume quality check

Copy and customize

Review my resume for an entry-level [ROLE]. Flag vague claims, missing evidence, spelling issues and formatting risks. Suggest clearer wording without inventing metrics, employers, credentials or tools. Keep all facts unchanged. Here is my redacted resume: [TEXT].

Prompt 3 — truthful tailoring

Copy and customize

Compare this role description with my verified resume. Suggest up to five edits that emphasize genuinely relevant evidence. Separate (A) supported edits from (B) missing skills. Never add facts or imply I know tools I have not used. [ROLE TEXT] [RESUME TEXT].

Final review checklist

- Every company, date, skill and qualification is accurate.
- Links work and contact information is up to date.
- The PDF is readable on a phone and a laptop.
- The filename is clear, e.g., Firstname_Lastname_Operations_Resume.pdf.

CHAPTER 06 / APPLICATIONS

Write a message with a real reason

Short, specific messages usually communicate more than an AI-generated wall of buzzwords.

A reusable outreach structure

Subject: Application for [Role] — [Your Name]

Example — edit for each role

Hello [Name], I am applying for [Role]. My experience with [relevant project or task] aligns with your need for [requirement]. I have attached my resume and would welcome the chance to discuss how I could contribute. Thank you for your consideration. — [Name]

Prompt 4 — improve clarity

Copy and customize

Rewrite this short application message in natural, professional English, under 130 words. Preserve every factual claim. Remove exaggerated praise and avoid promising results. [DRAFT] [JOB DESCRIPTION].

Never send the same generic outreach message to dozens of recruiters. Check the employer, recipient, location and attachment every time.

CHAPTER 07 / INTERVIEWS

Prepare with the STAR method

STAR helps turn experiences into short, evidence-based stories. It stands for Situation, Task, Action and Result.

Step	Question to answer
Situation	What was happening? Give one sentence of context.
Task	What was your responsibility?
Action	What did you personally do, step by step?
Result	What changed? Include evidence if available.

Practice example

“During a college event, the registration queue became disorganized (Situation). I was responsible for volunteer coordination (Task). I divided the queue, created a simple check-in sheet and assigned tasks to four volunteers (Action). Registrations ran more smoothly and we completed check-in before the event started (Result).”

Prompt 5 — interview practice

Act as a structured mock interviewer for an entry-level [ROLE]. Ask one question at a time. After my answer, give feedback on specificity, relevance and clarity. Do not write my personal stories for me.

CHAPTER 08 / INTERVIEW PRACTICE

Ten questions worth rehearsing

Practise aloud, keeping answers specific. The goal is clarity and confidence, not memorizing a script.

- Tell me about yourself and why this role interests you.
- What problem did you solve in a college, internship or personal project?
- Tell me about a time you worked with someone who disagreed with you.
- How would you prioritize three urgent tasks?
- How do you check your work for mistakes?
- What software or method have you learned recently?
- Describe a time you received difficult feedback.
- What would you do if you did not know an answer at work?
- Which skill are you actively improving and how?
- What questions do you have for the team?

Prepare two questions for the employer

Examples: “What does success look like after the first 90 days?” and “Which tools does the team use most often?” Avoid asking questions already answered plainly in the job post.

CHAPTER 09 / APPLICATIONS

Track every application

When applying to multiple jobs, memory is unreliable. A simple spreadsheet helps you follow up appropriately and learn what works.

Column	What to record
Date applied	YYYY-MM-DD
Company and role	Official employer and exact title
Job URL	Direct, legitimate application link
Resume version	The file you used
Status	Interested / Applied / Interview / Closed
Follow-up date	Only where relevant
Notes	Relevant feedback and next action

Weekly review

- Count applications, replies and interviews separately.
- Review whether you targeted suitable roles rather than maximizing clicks.
- Update your resume based on genuine feedback, not imagined ATS scores.
- Remove stale postings and keep personal data private.

Simple formula

Response rate = number of applications with employer responses / completed applications × 100. Treat very small samples cautiously; results vary widely by role and market.

CHAPTER 10 / SAFE USE OF AI

Protect your information and judgment

AI systems can make confident mistakes. Use them for organization, drafts and practice, not for unchecked legal or career decisions.

Protect privacy

- Redact your address, phone number and identifiers before sharing resumes with AI tools.
- Never upload other people’s resumes or confidential workplace records without permission.
- Verify current eligibility, work authorization and hiring requirements with official sources.
- Reject any job offer asking for recruitment fees, money transfers or identity documents through suspicious channels.

Quality-control checklist

- I independently reviewed every AI-generated factual claim.
- My examples reflect real experience.
- I verified application links using official company pages.
- I kept copies of what I submitted and when.

This resource provides general educational guidance, not employment, immigration or legal advice.

CHAPTER 11 / ACTION SPRINT

Your seven-day starter plan

Small daily actions are easier to sustain than a large, unfocused application burst.

Day	One practical action
1	Choose two role families and define preferred locations.
2	Build your master resume with verified projects and experience.
3	Study five real job descriptions and write the common requirements.
4	Prepare two role-specific resume variants.
5	Practise three interview questions and record your answers.
6	Submit a small batch of suitable applications; verify every link.
7	Review responses, improve your tracker and plan the next week.

A realistic definition of progress

Progress means better evidence, clearer applications, stronger interview answers and useful feedback. No job, salary or interview outcome is guaranteed.
